. 76. ASSIGNMENT 1. KELLEYS JAGANNATH S. Dharmaharaj. A Textbook Of Applied Electronics By R S Sedha 25 APRIL, 2016.Q: Python - Why my loop stops while looping? I'm trying to print all the words in a file (in alphabetical order). I would like to show which word was not printed yet and I want to see that it's because I have already printed all the words in the file. Example: FILE = open("words.txt", "r") words = [] count = 0 for word in file: count = count+1 words.append(word) if count > 0: print(word) else: print('The word you are trying to print '+ " " + word + " has already been printed.") break But it doesn't work, the program shows me the words but always prints two word. I think this is because the break is used before the whole cycle is finished. I tried using a "while" instead of a "for" but it didn't work either. And to make sure the file contains all the words in alphabetic order I have added the line: file.seek(0, 0) but it didn't work either. A: The problem here is that file.seek(0, 0) changes the pointer back to the beginning of the file before even starting the loop. The loop is guaranteed to run at least once, and so you'll write all of those words. If you move the file.seek(0, 0) after the loop, then this won't happen. Tag: story time This is a true story that happened some years ago. A friend from out of town called with some alarming news. Her child had an ear infection. It was clear that the child was in distress. My friend said her pediatrician gave her medicine. The medicine didn't work. So the pediatrician gave her more medicine. The medicine didn't work. So the pediatrician gave my friend more medicine. "When does this stop?" she asked me. She 6d1f23a050
